Profile

Fullstack developer and founder of an app development business with a live product on the App Store (400 downloads and 10 active subscribers). Strong background in mathematics and data analysis with the ability to break down complex problems and assess the viability of solutions. Experienced in working directly with stakeholders and confident at interpreting business needs and communicating technical information to non-technical audiences effectively.

Skills

Frontend & Mobile: React, Vite, TanStack Query, Zustand, Tailwind CSS, React Router, Redux
Backend & APIs: Node.js & Express, Spring Boot, Flask, Django, RESTful API, JWT Auth
Cloud & DevOps: AWS, Docker, Git, CI/CD (Automated Testing), Serverless Functions
Data & Storage: PostgreSQL, SQLAlchemy, Supabase
Mobile: React Native, Expo
Testing: Vitest, React Testing Library
AI: LLM Integration, Claude Code, Claude Skills, Agentic Workflows
Languages: TypeScript, JavaScript, HTML, CSS, Python, Java, SQL

Work Experience

527Studios Ltd

Founder & Full-Stack Developer March 2026 – Present

Tech Stack: TypeScript, React Native & Expo, Supabase, RevenueCat

Designed and developed mobile applications independently, leading commercial research, requirements gathering, user testing, App Store submission and marketing.

- SocialQuest | **App Store ~400 Downloads | 10 Active Subscribers**

  Noteworthy Features: Onboarding designed to maximise user retention; In-app subscription paywall integrated with RevenueCat; User authentication with Supabase; User session management through React Context; Access control for sensitive backend operations through Supabase RPC functions; dual-frame loader with continuously mounted frames to prevent transition flicker; loader dismissal synced with data fetch and animation completion.

- Hearth | **Release Pending Approval**

  Noteworthy Features: Dynamic onboarding flow based on user responses; Optimistic UI rendering for instant feedback; Off-screen tab persistence to prevent image re-decoding; Serverless recipe extraction through Supabase Edge Functions and LLM processing; Secure account deletion through a protected backend function with privileged access.

Digital Health and Care Wales

Data Analyst January 2023 – Present

Tech Stack: React, TypeScript, SQL, Python

- Took initiative to develop an in-house dashboard to track data quality issues for individual system clients – using Python to retrieve the data and React/TypeScript to build the dashboard interface. The dashboard automated a process that was previously conducted manually in preparation for weekly stakeholder meetings, saving the data team close to one hour every week.
- Led the data discovery for the decommissioning and migration of a legacy system. Identified the data owned by each client as part of the internal procedure and took initiative to challenge the need to migrate specific datasets. This revealed that approximately 29% of the system data did not need to be migrated which reduced migration and storage costs by nearly 25%.

- Managed the technical relationship with a platform provider responsible for ingesting and displaying safeguarding data. Collaborated with stakeholders to design a data delivery structure that maximised the amount of health data delivered within the constraints of the platform's ingestion API. The resulting data structure eliminated the risk of incomplete health records completely.

Projects

Pokémon App: Frontend Only | Repository Live site

Tech Stack: TypeScript & React Library, Tailwind CSS, Vitest & React Testing Library

Noteworthy Features: PokéAPI data fetching and caching with TanStack Query; Dynamic routes with React Router; Dynamic pagination with URL search param state; DOM event handling via useEffect; Global theme state via a persisted Zustand store; Mobile-responsive layouts; Styled with a mix of Tailwind CSS and custom CSS; CI/CD pipeline with ESLint and automated tests.

Journal App: Fullstack | Repository Live site

Tech Stack: JavaScript & React Library, Java & Java Spring Boot Framework, PostgreSQL, Docker

Noteworthy Features: Authorisation and authentication using client-side JWT based sessions; RESTful API endpoints implementing CRUD operations; Custom React hook for context-menu dismissal; Journal state management via React Context.

Diet-Based Recipe Finder App: Fullstack Dissertation Project | Repository

Tech Stack: JavaScript & React Library, Python & Flask Framework, SQLAlchemy

Noteworthy Features: Personalised recipe recommendations using vector space modelling; Cookie-based authentication with Flask-Login; Optimistic UI updates for asynchronous API requests; Prefetching of saved and recommended recipes on login.

Education

BSc Computer Science — First Class Honours Degree
Cardiff University — 2020 – 2023

Integrated Masters Physics
University of Oxford — 2019 – 2020

A-levels — A*A*A*A — Maths, Further Maths, Physics, Chemistry
Fitzalan High School — 2016 – 2018

AWS Certified Cloud Practitioner: Foundational — Verify
